

CITY GOVERNMENTS / MUNICIPALITIES

Various Locations around Colorado

VMI, Vegetation Management, Inc., has performed noxious weed control efforts for a wide variety of City Governments and Local Municipalities around the state. Services provided include Purple Loosestrife control; broadcast, handgun and backpack spray applications for a wide variety of noxious weeds.

VMI has written management plans, created GPS weed maps, and conducted application treatments in spring, summer and fall. When water is present on site, special attention is paid to the types of chemicals used managing weeds in close proximity to water.

The methodology for Purple Loosestrife control is labor intensive as each individual plant must be located, all flowers are cut off the plant, bagged and removed, thereby reducing potential seed germination, and finally each plant individually sprayed.

As with all types of weed control efforts climatic shifts occur annually which can vary emergence and bloom time requiring monitoring and multiple treatments.

On large parcels that have an inordinate amount of weeds our methodology requires multiple ground applications especially where disturbance occurs on the parcel. In order to effectively track ground applications the areas are broadcast sprayed with a tracker dye added to the mix which ensures thorough coverage is attained.

These clients are committed to being good stewards of their lands. They are also aware that effective implementation occurs with a long term weed control program.
